Convention for the Protection of All Persons against Enforced Disappearance, 2006	Ratified on 11/10/2016
2013 Arms trade treaty	Ratified on 07/10/2015
Convention to Eliminate all forms of Discrimination Against Women	Ratified on 21/06/1991

Geopolitical analysis

The Central African Republic suffers from structural underdevelopment and is one of the poorest countries in the world, with a human development index that placed it second to last in the 2018 UNDP Human Development Index.

The country, marked by chronic instability since its independence in 1958, descended into an unprecedented humanitarian, political and security crisis during the third Central African civil war that began in 2013. Constitutional order was restored in 2016 with the holding of presidential and legislative elections and the adoption of a new Constitution. The post-electoral crisis that followed the elections in 2020 finally ended with the Central African authorities taking back the country's main towns and main roads. Overall, access to affected communities has since improved. In some areas, it is necessary, and possible, to move from emergency to recovery and development activities.

Economic situation¹

The violence at the height of the crisis, between 2013 and 2014, led to a 37% fall in Gross Domestic Product (GDP). In 2022, GDP (in constant 2015 US dollars) was still 21% lower than in 2012. These ten years had been characterised by chronic under-investment by the State in basic social services (education, health, protection, etc.). According to World Bank figures, GDP growth has been zero since 2000, meaning that more than 20 years of growth have been lost.

In 2022, GDP per capita (in constant 2015 USD) was USD 362.6, 32% lower than in 2012, which means that most of the Central African population is living on a subsistence economy. The resulting insecurity and repeated population displacements have had serious socio-economic repercussions, compounded since 2020 by the COVID-19 crisis, the impact of the war in Ukraine and sub-regional conflicts (Sudan and Chad). These factors, external to the Central African conflict, are having a direct impact on inflation, which reached 5.7% in 2022. As a landlocked country in the heart of Africa, CAR feeling the full impact of global geopolitical developments.

The macroeconomic deterioration has had a heavy impact on Central African households. The decrease in imports and the reduction in production have caused a major increase in inflation, while household purchasing power has fallen. The prices observed on Central African markets are structurally variable and irregular, but the price increases since December 2020 have been exceptional in their magnitude and duration. Despite the resumption of commercial traffic along the corridor leading to Cameroon, the prices of essential goods have remained high. The median cost of the Survival Minimum Expenditure Basket (SMEB) increased by 22% between January and June 2022.

Sharp fluctuations and increases in the price of petrol have also been observed.

Summary of HI's work in the country

HI first worked in the Central African Republic from 1994 to 2004, running a number of development programmes. In particular, HI helped open the Bangui orthopaedic centre (ANRAC), which was supported by the International Committee of the Red Cross (ICRC) after HI's departure. HI also worked on setting up a two-year university course to train physical therapy assistants, the only training course of its kind available in CAR. Two classes have graduated from this programme and 32 assistant physiotherapists have been trained.

In 2016, HI returned to CAR to implement humanitarian logistics projects. The programme now manages an air logistics platform that organises the reception, control, storage and preparation of air cargo transported by UNHAS flights for humanitarian organisations.

In September 2018, integrated rehabilitation care activities (physical and functional rehabilitation with MHPSS activities) were launched at the general hospital in Bambari, in Ouaka prefecture. This programme is carried out in partnership with MSF-Holland, which supports the surgery section of the general hospital, and is intended to strengthen the capacity and case management of the many people injured by the violence in and around the town.

A Technical Cell for Inclusive Action was set up in 2019 in Bangui, with national coverage. It enables humanitarian actors to adapt their response to people with specific needs so that they can also access humanitarian aid.

Since 2020, HI has been running civil engineering projects to rehabilitate airstrips, roads and bridges. These projects are part of HI CAR's objective of facilitating humanitarian access in the country.

Functional and physical rehabilitation activities in Bangassou have ceased due to a lack of funding.

Since 2022, HI CAR has been running stimulation therapy activities with children who have experienced an episode of acute to severe malnutrition. The aim of stimulation therapy is to prevent and reduce developmental delays and disabilities linked to malnutrition and to train parents to stimulate their child. Parents of children with severe acute malnutrition can also receive psychosocial support, if necessary. Stimulation therapy is organised in the same hospitals as the integrated rehabilitation activities. HI has also launched an education project on the risks of explosive devices in Ouham-Pendé, in northeastern CAR because of the increasing use of explosive devices by parties to the Central African conflict in northwestern CAR.

In 2023, the first inclusive education project was launched to assist the Central African authorities with their national education strategy. HI funding also funded a study of the need to relaunch a physical therapy training curriculum in support of the FACSS (Faculty of Health Sciences) in Bangui. Finally, HI has just started a pilot project on inclusive education in three prefectures: Ouaka, Ouham and Ouham-Pende. The aim of this project is to promote access to quality education for girls and boys with disabilities. It is being incorporated into all three

components of the RIMSCASSA project (functional rehabilitation, MHPSS and inclusion) via an integrated approach.

Overview of current projects

Sectors in which HI is running projects, with a focus on beneficiaries and operating partners

Main sectors of intervention	Main activities:	Beneficiaries	Partners	Location	Project start and end date	Donors funding the project
Helping to provide a humanitarian response to the most vulnerable communities affected by the crises in CAR by facilitating physical access for local and international humanitarian actors	<ul style="list-style-type: none">• System for gathering information on hotspots• Mobile rapid intervention team: rehabilitation of hotspots• Strengthening the capacities of humanitarian bodies and actors	<ul style="list-style-type: none">• Humanitarian actors working in CAR• Population concerned by the rehabilitation works	<ul style="list-style-type: none">• Logistics cluster• RRM• ICCG• GTA/CMCoord• CCO• Ministry of Public Works and Transport• CLER	National (priority humanitarian access zones)	May2023 - April 30 2025	ECHO
